

JVC

SERVICE MANUAL

BR-7000ERA

SPECIFICATIONS

VHS *Hi-Fi*

GENERAL

Format	: VHS 1/2" PAL Standard
Power requirement	: 220/240 V~, 50/60 Hz
Power consumption	: 43 watts (Max. 55 watts with remote control unit, 12 V \square , 550 mA)
Dimensions	: 440(W) x 174(H) x 448(D) mm
Weight	: 17.5 kg
Operating temperature	: 5°C to 40°C
Tape speed	: 23.39 mm/sec.
Recording time	: Max 240 min. with E-240 cassette
FF/REW time	: Less than 4.0 min. for E-180 cassette

VIDEO

Video-signal system	: PAL colour and CCIR monochrome signals, 625 Lines
Input	: 0.5 to 2.0 Vp-p, 75 ohms, unbalanced
Output	: 1.0 Vp-p, 75 ohms, unbalanced
Signal-to-noise ratio	: 45 dB (B/W) (Rohde and Schwarz)
Horizontal resolution	: 250 Lines (Colour)

AUDIO

Input	: -6 dBs, 10 k-ohms, unbalanced (Normal)
	: -6 dBs, 10 k-ohms, balanced (Hi-Fi)
Output	: -6 dBs, into 1 k-ohm, unbalanced (Normal, Hi-Fi)
Frequency response	: 20 Hz to 12 kHz (Normal) 20 Hz to 20 kHz (Hi-Fi)
Dynamic range	: 87 dB (Hi-Fi)
Signal-to-noise ratio	: 46 dB (NR-on), 42 dB (NR-off) (Normal) at 3 % distortion
Wow and flutter	: Less than 0.005 % wrms (Hi-Fi)

CONNECTORS

Video input/output	: BNC-type
Audio input	: XLR (Hi-Fi) RCA (Normal)
Audio output	: RCA (Hi-Fi, Normal)
Remote control	: 34-pin connector
AC IN	: 3-Wired AC connector
Accessories	: Hour meter x 1

Design and specifications subject to change without notice.

6.2.23	Terminal board assembly	6-28
6.2.24	Audio limiter switch board assembly	6-28
6.2.25	A/C head board assembly	6-28
6.2.26	Power transistor board assembly	6-28

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the Δ symbol and shaded (影) parts are critical for safety.
Replace only with specified part numbers.
Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.
Caution for continued protection against fire hazard.
Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

- | | | |
|--------------------|--------------------------------------|------------|
| 1) Insulation Tape | 3) Spacers | 5) Barrier |
| 2) PVC tubing | 4) Insulation sheets for transistors | |

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

- 1) Connector part number: E03830-001
- 2) Required tool: Connector crimping tool of the proper type which will not damage insulated parts.

3) Replacement procedure

- (1) Remove the old connector by cutting the wires at a point close to the connector.
Important: Do not reuse a connector (discard it!).

Fig. 3

- (2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

Fig. 4

- (3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

Fig. 5

- (4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

Fig. 6

- (5) Check the four points noted in Fig. 7.

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

Fig. 9

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio In, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

Fig. 10

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	$Z \leq 0.1 \text{ ohm}$
Europe & Australia	$Z \leq 0.5 \text{ ohm}$

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	R ≥ 1 MΩ/500 V DC	AC 1 kV 1 minute	d, d' ≥ 3 mm
100 to 240 V			AC 1.5 kV 1 minute	d, d' ≥ 4 mm
110 to 130 V			AC 900 V 1 minute	d, d' ≥ 3.2 mm
110 to 130 V	USA & Canada	—	AC 3 kV 1 minute	d ≥ 4 mm
200 to 240 V			AC 1.5 kV 1 minute (Class II)	d' ≥ 8 mm (Power cord)
			AC 1.5 kV 1 minute (Class I)	d' ≥ 6 mm (Primary wire)

Table 1 Specifications for each region

AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan		$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada		$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	Europe & Australia		$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Antenna earth terminals
220 to 240 V			$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

WARNING:
TO PREVENT FIRE OR SHOCK
HAZARD, DO NOT EXPOSE THIS
UNIT TO RAIN OR MOISTURE.

Warning Notice FOR YOUR SAFETY (Australia)

1. Insert this plug only into effectively earthed three-pin power outlet.
2. If any doubt exists regarding the earthing, consult a qualified electrician.
3. Extension cords, if used, must be three-core correctly wired.

FOR YOUR SAFETY

Install any external aerial to AS 1417.1

WARNING—THIS APPARATUS MUST BE EARTHED IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

GREEN-and-YELLOW: EARTH
BLUE: NEUTRAL
BROWN: LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows. The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the safety earth symbol or coloured GREEN or GREEN-AND-YELLOW. The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or which is coloured BLACK. The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

CAUTION

To prevent electric shock, do not open the cabinet. No user serviceable parts inside. Refer servicing to qualified service personnel.

NOTE: The rating plate and the safety caution are on the rear of the unit.

POWER SYSTEM

Connection to the mains supply
The operating voltage of this set is preset to 240 V~ at the factory.

Before connecting to mains, check that the voltage selector on the rear panel is set to the same voltage as your local mains supply.

Adapting to local power line

This set operates on either 220 or 240 V~. If the preset voltage is different from the power line voltage in your area, reset the voltage selector by inserting a screwdriver into the slot of the voltage selector and turning it until the correct voltage is displayed.

FEATURES

A New Hi-Fi VHS recorder designed exclusively for tape duplication with the following features:

Space-saving, front-loading and rack-mountable VHS recorder.

Heavy-duty mechanism

- Aluminium diecast chassis
- Head drum, capstan and reel servos with independent direct-drive motors to assure stable recording and playback.

Top quality Hi-Fi sound

- Independent rotary FM-audio heads
- Frequency response 20 Hz to 20 kHz
- Dynamic range 87 dB
- Harmonic distortion less than 0.7 %
- Wow and flutter less than 0.005 % (WRMS)
- Channel separation more than 60 dB

Duplicator-friendly operation

- Wide opening with a guide for easy loading and unloading of cassette.
 - Large recording indicator for quick, at-a-glance checking.
 - Recording capability of cassette with its recording safety tab removed.
 - Large video/tracking and audio meters
 - Cover for operational control buttons to avoid accidental misoperation.
 - Video AGC on/off switch
- Easy maintenance and serviceability
- Door for tape path cleaning
 - Hour meter (2000H) indicating drum running time
 - Test points on the front panel

CONTROLS AND CONNECTORS

FRONT PANEL

BASIC FUNCTION BUTTONS

- **EJECT button**
Press to eject the cassette. This button can be pressed in any mode. The EJECT LED will flash during automatic unloading of the cassette and then be extinguished upon completion of ejection.
- **Record button (REC)**
 - Pressing the REC and PLAY buttons simultaneously during playback engages the Record mode immediately and both REC LEDs light. (The PLAY LED also remains lit.)
 - Pressing the REC and PLAY buttons simultaneously during FF or REW engages the Stop mode first, then starts tape loading, after which recording begins.
 - Pressing the REC and PLAY buttons simultaneously in the Stop mode starts tape loading immediately, after which recording begins.
 - In cases 2 and 3 above, both REC LEDs light continuously and the PLAY LED blinks during tape loading and remains lit together with the two REC LEDs when recording begins.
 - If, during PLAY, the REC button is pressed, the E-E mode is entered for both video and audio, while the REC button is being held pressed. The picture may be distorted at switching points from PLAY to E-E or from E-E to PLAY. This is normal.
- **Rewind button (REW)**
 - Pressing the REW button in the Stop or Fast Forward mode engages the Rewind mode immediately, the REW LED lights.
 - Pressing the REW button in the Play, Pause, Record or Record Pause mode has no effect. (The current mode remains engaged.)
 - When the REW button is pressed during tape unloading (the STOP or EJECT button has been pressed in the Play or Record mode and the STOP or EJECT LED is blinking), the REW LED starts blinking and the STOP or EJECT LED is extinguished. The Rewind mode engages automatically, immediately after completion of tape unloading, with the REW LED remaining lit.
- **STOP button**
 - Pressing the STOP button during playback or recording starts tape unloading and engages the STOP mode.
 - Pressing the STOP button in the Fast Forward or Rewind mode, likewise, engages the Stop mode immediately.
 - During tape unloading the STOP LED blinks; upon completion of unloading, the STOP LED remains lit.
- **PLAY button**
 - Pressing the PLAY button in the Stop mode starts tape loading immediately for playback.
 - Pressing the PLAY button in the Fast Forward or Rewind mode causes the Stop mode to be entered first, then tape loading starts for playback.
 - The PLAY LED blinks during tape loading, and remains lit upon completion of loading.

PAUSE button

- Pressing the PAUSE button in the Play mode stops tape running immediately, changes the video signal to the E-E mode and mutes the audio output. The PLAY LED is extinguished and the PAUSE LED lights.
 - Pressing the PAUSE button during the Record mode stops tape running with the Record mode still engaged. The PLAY LED remains lit, the PAUSE LED lights and both REC LEDs begin flashing.
 - To release the Pause mode to resume playback or recording, press the PLAY button.
 - The Record Pause mode can also be entered by pressing the REC and PAUSE buttons in the Stop, Rewind or Fast Forward mode.
- **Fast Forward button (FF)**
Same operation as the REW button.

INDICATOR SECTION

- **REC indicator**
- **Hi-Fi REC indicator**
Lights when the Hi-Fi audio signals are being recorded, with the Hi-Fi REC select switch ● set to ON or REMOTE.
- **WARNING indicator**
This LED lights when the tape is not running properly or condensation occurs inside the unit.
- **Noise reduction (NR) indicator**
Lights when the noise reduction switch (NR) is set to ON.

TEST POINTS

- **Hi-Fi audio head output signal test point (A-RF)**
The Hi-Fi audio signal is output in the form of an FM signal during playback, allowing clogged or worn heads to be detected.
- **Video head output signal test point (V-RF)**
The video head signal is output in the form of an FM signal during playback, allowing clogged or worn heads to be detected.
- **Hi-Fi audio output signal test points (LEFT and RIGHT)**
To check the signals output from the rear panel Hi-Fi AUDIO OUT connectors.
- **NORMAL audio output signal test points (LEFT and RIGHT)**
To check the signals output from the rear panel NORMAL AUDIO OUT connectors.
- **D-PULSE pin**
Connect to the external trigger terminal of an oscilloscope.
- **GND pin**
Connect to the ground terminal of an oscilloscope.

METER SECTION

- **TRACKING/VIDEO LEVEL meter**
This meter functions as a tracking meter during playback and as a video level meter in any other mode.
 - **TRACKING control**
To minimise noise bars during playback, turn this control so that the meter ● makes its maximum deflection.
 - **VIDEO LEVEL control**
To adjust the video signal level manually, set the VIDEO AGC switch ● to OFF and turn this control so that the meter ● deflects into the green area.
 - **LEFT/RIGHT AUDIO LEVEL meters**
Indicate the levels of the audio signals (playback signals during playback or E-E signals in any other mode).
 - **Hi-Fi/NORMAL LEFT AUDIO REC LEVEL controls**
To adjust the left channel Hi-Fi or NORMAL audio recording level, turn these controls so their corresponding meter ● deflects to "0" with the loudest signal.
 - **Hi-Fi/NORMAL METER select switch**
 - **Hi-Fi/NORMAL RIGHT AUDIO REC LEVEL controls**
To adjust the right channel Hi-Fi or NORMAL audio recording level, turn these controls so their corresponding meter ● deflects to "0" with the loudest signal.
 - **VIDEO AGC switch**
Set to ON to activate the built-in video AGC circuit.
 - **Hi-Fi REC select switch**
 - ON: Set to this position to record the Hi-Fi audio signals.
 - OFF: Set to this position when recording of the Hi-Fi audio signals is not desired. (Also FM carrier signal will be cut off).
- REMOTE: Set to this position to remote-control above function via the serial code remote control.
- **NORMAL AUDIO noise reduction switch (NR)**
Set to ON to activate the built-in Dolby* noise reduction system to reduce tape hiss.

POWER button

Press to turn the power on. The level meters will be illuminated. Pressing again will switch the power off.

Note:

If the POWER button is set to OFF in the Play mode, the pinch roller remains pressed by the capstan with the tape between the two. This causes deformation of the pinch roller rubber, resulting in irregular tape movement. Therefore, set the POWER button to OFF only after confirming that the unit is in the Stop mode. (During actual tape unloading, while the STOP LED is blinking, do not press the POWER button.)

Tape COUNTER and COUNTER RESET button

This counter indicates the relative position on the tape. Pressing the COUNTER RESET button sets the counter to 0000.

Cassette loading slot

With the POWER button pressed to on, insert a video cassette with its labelled edge facing toward you. The cassette carriage itself will automatically take control and retract the cassette into the correct loaded position. The lower door flap will change colour to show that a cassette is loaded.

HOUR METER

This indicates the total operating time. After 2000 hours of operation, the red line moves to the right end of the scale. (Attach the meter securely before use.)

Guard cover mounting hole

Tape path maintenance door

For access to the tape path for cleaning, use a screwdriver to remove this cover.

* Dolby noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

REAR PANEL

- **AC input socket (AC IN)**
Connect to a 220 or 240 V~, 50/60 Hz power outlet.
- **VOLTAGE SELECTOR**
Using a screwdriver, turn until the correct voltage (220 or 240 V) is displayed.
- **FUSE holder**
- **SERIAL CODE IN/OUT connectors**
- **Ground terminal**
- **REMOTE control connector (34-pin)**
- **VIDEO IN/OUT connectors**
- **Hi-Fi AUDIO IN connectors (LEFT and RIGHT)**
- **NORMAL AUDIO IN connectors (LEFT and RIGHT)**
- **Hi-Fi AUDIO OUT connectors (LEFT and RIGHT)**
Deliver signals of the Hi-Fi audio track.
- **NORMAL AUDIO OUT connectors (LEFT and RIGHT)**
Deliver signals of the longitudinal audio track.
- **FULL REPEAT switch**
 - ON: Set to this position to repeatedly play back the pre-recorded tape in its entirety.
 - OFF: Set to this position when the repeat function is not desired.
- **AUDIO INPUT SELECT switch**
 - H COM: Set to this position to record the audio signals being input to the Hi-Fi AUDIO IN connectors onto both the Hi-Fi and longitudinal audio tracks — a "Hi-Fi Combined" recording.

SEP:

Set to this position to record the signals being input to the Hi-Fi AUDIO IN connectors onto the Hi-Fi audio track, and to the NORMAL AUDIO IN connectors onto the longitudinal audio track — a "Separate" recording.

N COM:

Set to this position to record signals being input to the NORMAL AUDIO IN connectors onto both the Hi-Fi and longitudinal audio tracks — a "Normal Combined" recording.

TEST POINTS

The output signals from the Hi-Fi audio heads, video heads, Hi-Fi audio track and normal audio track are available at the front panel test points. Connect an oscilloscope to these test points to check the performance and condition of the unit.

Connection	Items to be checked	Standard waveform
Hi-Fi audio head output 	<ul style="list-style-type: none"> • Tape-to-head contact • Tape running stability • Inferior RF after head replacement 	<ul style="list-style-type: none"> • "4" triggered
Video head output 	<ul style="list-style-type: none"> • Compatibility of tape pattern • Tape-to-head contact • Tape running stability • Tracking • Video signal recording level • Abnormality in RF 	<ul style="list-style-type: none"> • "4" triggered
Hi-Fi audio output 	<ul style="list-style-type: none"> • Quality of recording and playback 	<ul style="list-style-type: none"> • Approx. -6 dBs output at reference input level • Output impedance: less than 5 k-ohms
Normal audio output 	<ul style="list-style-type: none"> • Quality of recording and playback • Tape-to-head contact, dirty head (fluctuation of audio level) • Alignment of audio/control head 	<ul style="list-style-type: none"> • Approx. -6 dBs output at reference input level • Output impedance: less than 5 k-ohms

SPECIFICATIONS

GENERAL

Format	: VHS 1/2" PAL Standard
Power requirement	: 220/240 V~, 50/60 Hz
Power consumption	: 43 watts (Max. 55 watts with remote control unit, 12 V ~, 550 mA)
Dimensions	: 440(W) x 174(H) x 448(D) mm
Weight	: 17.5 kg
Operating temperature	: 5°C to 40°C
Tape speed	: 23.39 mm/sec.
Recording time	: Max 240 min. with E-240 cassette
FF/REW time	: Less than 4.0 min. for E-180 cassette

VIDEO

Video signal system	: PAL colour and CCIR monochrome signals, 625 Lines
Input	: 0.5 to 2.0 Vp-p, 75 ohms, unbalanced
Output	: 1.0 Vp-p, 75 ohms, unbalanced
Signal-to-noise ratio	: 45 dB (B/W) (Rohde and Schwarz)
Horizontal resolution	: 250 Lines (Colour)

AUDIO

Input	: -6 dBs, 10 k-ohms, unbalanced (Normal)
	: -6 dBs, 10 k-ohms, balanced (Hi-Fi)
Output	: -6 dBs, into 1 k-ohm, unbalanced (Normal, Hi-Fi)
Frequency response	: 20 Hz to 12 kHz (Normal)
	: 20 Hz to 20 kHz (Hi-Fi)
Dynamic range	: 87 dB (Hi-Fi)
Signal-to-noise ratio	: 46 dB (NR-on), 42 dB (NR-off) (Normal) at 3 % distortion
	: Less than 0.005 % wrms (Hi-Fi)

Wow and flutter

CONNECTORS

Video input/output	: BNC-type
Audio input	: XLR (Hi-Fi)
	: RCA (Normal)
Audio output	: RCA (Hi-Fi, Normal)
Remote control	: 34-pin connector
AC IN	: 3-Wired AC connector
Accessories	: Hour meter x 1

Design and specifications subject to change without notice.

SECTION 1 GENERAL DESCRIPTION

1.1 DISASSEMBLY

Improvements of the BR-7000BRA over the BR-7000BR. The performance of the BR-7000ERA Hi-Fi Duplicator is improved over that of the BR-7000ER in the following points:

1. Improved Hi-Fi audio performance
 - 1) Expanded dynamic range (from 82 dB to 87 dB)
 - 2) Reduced switching noise, for cleaner sound recording and playback
 - 3) Enhanced reliability through the more intensive use of ICs and automated insertion of circuit components
 - 4) Improved control linearity of the Hi-Fi REC LEVEL controls on the front panel (improved from curve A to curve B)
2. Improved drum/capstan circuits
 - The three circuit boards forming the drum and capstan servo circuits and the drum MDA circuit have been integrated into one circuit board through the more intensive use of ICs, and the number of points to be adjusted has been reduced from 12 to two, thus greatly improving reliability.

3. Alteration of the mother board

- The mother board has been changed to accommodate the single circuit board made possible by the integration of the drum/capstan servo circuits and the drum MDA circuit.

4. Mechanical changes

- 1) The capstan motor has been changed.
- 2) The drum assembly has been changed while retaining the same video heads as the BR-7000ER, for improved linearity and tape interchangeability.
- 3) The sub-deck has also been changed to accommodate the new drum assembly.
- 4) The reel motor has been changed to obtain higher torque.
- 5) Head clogging has been eliminated by the addition of a video head cleaning mechanism, thus enhancing reliability.
- 6) The dew sensor has been changed to accommodate the new sub-deck.
- 7) The drum head relay circuit board has been changed to accommodate the new sub-deck.

1.2 EXTERNAL COVERS

- Top cover
 1. Take out two screws and remove the top cover in the rearward direction.
- Front panel
 1. Remove the top cover.
 2. Take out five screws and remove the front cover.
- Bottom cover
 1. Take out six screws and remove the bottom cover.

Fig. 1.1 External covers

- Rear panel
 1. Remove the top cover and feet.
 2. Take out three screws and remove the rear panel.
- Connector panel
 1. Take out ten plastic rivets and remove the connector panel.
- Upper door and Lower door
 1. Remove the front panel.
 2. Move the lower door in the arrow direction to remove it. Use care regarding the torsion spring.
 3. In the same manner, move the upper door in the arrow direction to remove it. Use care regarding the torsion spring.

4. When reassemble the doors, perform the following:
 - 1) Observe the upper door and recognize the mark on the gear portion.
 - 2) Set the long straight part of the torsion spring toward the upper door.
 - 3) Install the upper door in the state with the mark corresponding with the mark of the upper door opener on the cassette housing.
- Right and Left side panel
 1. Each side panel can be removed by taking out four screws.

1.3 CIRCUIT BOARD ASSEMBLIES

Fig. 1-2 External covers

SECTION 2 MECHANICAL ADJUSTMENT

2.1 FOREWARD

Mechanism adjustments described in this section are only those considered necessary for field services, and some kind of adjustments requiring highly precise equipment and technique are excluded. Periodical checkup and maintenance are very important to keep the machine with the original performance as well as to prevent tapes from damage. Adjustments which require specified tools and jigs must be performed with them.

2.2 REQUIRED JIGS AND EQUIPMENT

For proper and complete adjustments the following jigs and equipment are necessary. If adjustments are done without those jigs and tools, it takes a long-time trial and error and it ends with unsatisfactory results in accuracy and performance. Besides the following, general-purpose tools including hexagonal wrenches (1.5 mm and 2.4 mm) are necessary.

Note: For test equipment and jigs necessary for electrical adjustments, refer to Section 3 "Electrical Adjustment".

Alignment tapes MH-2, MH-F8	Parallel check plate PUJ50204	Height gauge PUJ42147-2	Master plane fixture PUJ42146
Torque gauge PUJ48075-3	TU guide height gauge PUJ44650	A/C head positioning Tool PUJ44653	
Cassette torque meter PUJ42881, PUJ42881-B	Microchecker PUJ49712-2	Thickness gauge PUJ48017

★ Cleaning ○ Check ● Replacement

Note: ● The above schedule is just a reference for machines used in an average condition.
● Life time of the upper drum greatly depends on working conditions.

Table 2-3 Periodical servicing schedule

2.5 MAIN PARTS REPLACEMENT

When replacing parts, remove external coverse, circuit boards, shield covers, cassette housing, etc., as required.

2.5.1 Cassette housing and cassette motor

Note: Avoid operating the slide plate within with fingers, etc. when dismantling the cassette housing without using a cassette. Danger is involved when the reinforcement touches the roof plate at the time of cassette loading.

Fig. 2-4 Cassette housing

- [A] Cassette housing removal
1. Disconnect the connector of the cassette housing board.
 2. Remove the mounting screws of the front panel. Shift the top of the front panel forward to facilitate removing the cassette housing.
 3. Take out 4 screws ①. Carefully lift the cassette housing upward to remove it.

Note: To operate mechanism after removal of the cassette housing, observe the following steps.

Fig. 2-5 Removint cassette housing

- Operation preset

This configuration allows operating the mechanism with the cassette housing removed. Perform as follows.

- a) Place the cassette housing upside down on the rear bracket, as shown in Fig. 2-6. Engage the connectors of the cassette housing with the cassette housing board.
- b) Insert cassette and perform loading.
- c) After completion of loading and the sensors are enabled, use the operation switches to select the desired modes.

Fig. 2-6 Mechanism functions

- [B] Cassette motor
- 1) Remove the cassette housing. Quickly unsolder the wires of the cassette motor.
 - 2) Take out 2 screws ② and replace the cassette motor (see Fig. 2-5).
 - 3) Use care regarding motor wire polarity and reassemble by reversing the above steps.

Fig. 2-7 Cassette motor wiring

2.5.2 Upper drum

1. Remove two screws (DPSP3006ZY) fixing the brush ass'y to take it off.

Fig. 2-8 Upper drum replacement

2. Unsolder the upper drum board by an unsoldering iron to take it off, remove a screw ① and then pull out the upper drum upwards.
3. Clean contact surfaces of a new upper drum and lower drum.
4. Fix the upper drum board to the upper drum.
5. Set the upper drum with the most careful attention to its position.
6. Adjust excentricity of the upper drum. (Refer to Section 2.5.4.)
7. Install the brush assembly.

When re-assembling, take care so that its contact point slightly comes off the center of the drum shaft but to be within 2 mm dia.

Fig. 2-9

8. After replacement, perform the following checks and adjustments.

- 1) Tape transport system adjustment
- 2) Switching point (Sect. 3.5.2)
- 3) Sub tracking (Sect. 3.5.3)
- 4) Head resonance and Q (Sect. 3.8.11)
- 5) REC FM level (Sect. 3.8.10)
- 6) PB level and channel balance (Sect. 3.8.12)
- 7) REC color level and channel balance (Sect. 3.8.17)

Fig. 2-10 Upper drum wiring

Note: Use care regarding position when installing the new upper drum. As shown in Fig. 2-10, observe that hole "A" (2.7 mm dia.) of the upper drum and hole "B" (1.6 mm dia.) of the flywheel are positioned 180° apart.

2.5.3 Lower drum motor ass'y

Note: The drum motor and the lower drum cannot be replaced separately.

1. Take off the cleaning ass'y behind the drum ass'y.
2. Take off the upper drum.
3. Remove screws ④ and pull out the drum ass'y upwards.
4. Install a new lower drum motor ass'y in the reverse order of the disassembling. At this time, be careful not to damage and scratch it.
5. Adjust eccentricity of the upper drum.
6. Perform the same checkup and adjustment as that for the upper drum replacement.

Fig. 2-11 Lower drum motor assembly

2.5.4 Upper drum eccentricity

- If the upper drum is mounted even slightly out of center with respect to the drum shaft, relative head-to-tape speed becomes inconsistent within the rotation period of the upper drum. This can cause jitter and picture distortion.
- After the upper drum is replaced, perform the following adjustments.

1. Set the operation preset and then set for the Play mode.
2. After completion of loading, switch off the power.
3. Remove the earth plate.

Fig. 2-12 Micro-checker mounting

4. Set the micro-checker (PUJ49712-2) on the guide pin as shown in Fig. 2-12. Use the accessory hex wrench (metric) to tighten the fixing screw.
5. Gradually turn the fine adjust knob clockwise so that the dial indicator registers zero on the scale. Adjustment of ± 10 scale divisions is possible on the outer frame, but do not turn more than that.
6. While using care not to apply lateral pressure to the drum, slowly turn the upper drum and read the deviations indicated by the micro checker. Check for needle deflection within 2 microns (± 1 microns).
7. If deviation is greater than 2 microns, turn the fine adjust knob counterclockwise to disengage the test probe from the drum. Loosen the 2 screws of the upper drum, carefully adjust the position, then retighten the 2 screws in a balanced manner. Afterwards, again use the micro-checker to check the eccentricity.
8. After using, turn the fine adjust knob counterclockwise and remove the micro-checker.
9. Install the earth plate.
10. Supply power and set for the Stop mode. Be sure to remove the cover.
11. Connect oscilloscope to TP8 of the Pre/Rec board.
12. Gradually turn the TRACKING control and confirm simultaneously maximum CH-1 and CH-2 waveforms.
13. If difference is obvious, remove the upper drum, clean the bottom face of the upper drum and the lower drum flywheel. Reinstall and repeat above steps 1 to 10.

Microchecker handling

1. The Microchecker is a high precision instrument. Do not subject it to vibration or shock.
2. Do not apply unnecessary force to the measuring probe.
3. The meter and holder position and direction have been pre-adjusted. Do not disassemble or disturb the adjustment.
4. The meter outer rim can be turned about ± 10 scale divisions. Do not turn it forcibly (more than 300 g-cm).
5. Use care that the Microchecker does not directly contact the upper drum (particularly the video heads).
6. Before setting the Microchecker, turn the calibration knob counterclockwise. Avoid contacting the upper drum when setting.
7. When setting, confirm that the measuring probe operating direction is centered on the upper drum.
8. If rubbing or grating sound occurs during measurement, the setting is incorrect. Also check for contamination of the upper drum and measuring probe.
9. Since the instrument is set while the loading arm is extended, power must not be supplied while the Microchecker is being used.

Fig. 2-13 Micro-checker

2.5.5 Capstan motor assembly

The capstan motor cannot be replaced as a single motor component. Replace the capstan motor ass'y which includes the capstan, capstan FG and flywheel when the capstan motor requires replacement. Do not take out the two screws on the bottom side.

1. Disengage the connector from the capstan motor assembly (from the bottom side).
2. Take out the three screws and remove the capstan motor ass'y.
3. Install a new capstan motor ass'y by reversing the above steps.

Fig. 2-14

2.5.6 Supply reel motor

1. Remove the cassette housing ass'y (refer to section 2.5.1).
2. Take out screw ① and move the tension band to the side.
3. Take out the screw ② and E-ring then remove the supply reel FG board and supply brake.
4. Loosen the setscrew and remove the supply reel disk ass'y in the upward direction.
5. Disengage the connector, from the reel motor (from the bottom side).
6. Take out the four motor screws and remove the supply reel motor.
7. Install a new supply reel motor and reassemble by reversing the above steps.
8. Perform the reel disk height adjustment (refer to section 2.6.2).

Fig. 2-15 SUP. reel motor

2.5.7 Take-up reel motor

1. Remove the cassette housing ass'y (refer to section 2.5.1).
2. Take out the screw and two E-ring, then remove the take-up reel FG board and take-up brake.
3. Loosen the setscrew and remove the take-up reel dis-ass'y in the upward direction.
4. Loosen the two screws and remove the brake solenoid.
5. Disengage the connector from the take-up reel motor.
6. Take out the four screws and remove the take-up reel motor.
7. Install a new take-up reel motor and reassemble by reversing the above steps.
8. Perform the reel disk height adjustment (refer to section 2.6.2).

Fig. 2-16

2.5.8 Loading drive gear assembly/loading motor

Note: Before replacing the loading motor, carefully observe its mounting condition (particularly wire polarities, positioning and clamping).

1. Take out the two screws (A) and remove the loading drive gear assembly.
2. Unsolder the wires from the motor terminals.
3. To replace loading drive gear assemblies, place a new assembly by reversing the above steps and proceed to 7 below and after. In case of motor replacement, proceed to 4 below.
4. Disengage the belt from the pulley, take out the two screws (B) and remove the motor from the loading gear assembly.
5. Place a new loading motor and reassemble by reversing the above steps. At the time, use care as to wire polarities. Use a 0.5 mm thickness gauge to mount the motor pulley.
6. Move the pole base on the subdeck by hand to the loading end position and install the loading gear assembly.
7. Turn the loading motor pulley by hand to move the loading ring slightly in the unloading direction. Check for equal spacing between the supply pole guide and supply pole base, and between the take-up pole guide and take-up pole base. See Fig. 2-18. If not equal, the loading gear ass'y mounting position is incorrect. Repeat the above step 6.

Fig. 2-17 Loading motor replacement

Fig. 2-18 Loading ring check

2.5.9 Audio/control (A/C) head assembly

1. Take out screws (A), (B) and (C) to remove the A/C head assembly.
2. Remove the A/C head circuit board. Use care not to damage the wires.
3. Replace the A/C head subassembly and reassemble by reversing the above steps.
4. Perform the following checks and adjustments.

- 1) Audio/control head parallel (refer to section 2.6.11)
- 2) Tape transport (refer to section 2.7)
- 3) Audio/control head height (refer to section 2.8.4)
- 4) Audio/control head azimuth (refer to section 2.8.5)
- 5) Audio/control head position (refer to section 2.8.7)
- 6) Interchangeability adjustment (refer to section 2.8)
- 7) Audio adjustment (refer to section 3.7)

Fig. 2-19 A/C head replacement

2.6 CHECKS AND ADJUSTMENT

2.6.1 Master plane jig setting

1. Remove the cassette housing assembly.
2. As shown in Fig. 2-20, position the master plane jig with respect to the reference shaft, pinch roller shaft and the stud.

Fig. 2-20 Master plane jig setting

2.6.2 Reel disk height

1. Set the master plane jig.
2. Use the height gauge (PUJ42147-2) to confirm that the reel disk height. Measure at 2 places 90° apart. When measuring, press the reel disk downward to compensate for mechanical play.
3. The correct height is between planes A and B, as shown in Fig. 2-21. If necessary, loosen the setscrew and adjust to the correct height.

Fig. 2-21 Reel disk height adjustment

2.6.3 Supply guide pole height

1. Set the height gauge (PUJ42147-2) on the subdeck and check the perpendicularity.
2. Confirm that the height of the lower face of the upper flange.
3. If guide pole height has been adjusted, tape transport adjustments are required (refer to section 2.7).

Fig. 2-22 Supply guide pole height adjustment

2.6.4 Take-up tape guide roller height

1. Set the master plane jig. Use the height gauge (PUJ44650) to confirm that the height of the lower face of the upper flange.
2. If necessary, loosen the setscrew on the lower part, then adjust the height by turning the screw on the top.
3. If the height has been adjusted, tape transport adjustments are required (refer to section 2.7).

Fig. 2-23 Take-up tape guide roller height adjustment

2.6.5 Take-up tape guide roller parallel

1. Put the plane surface of A/C head parallel check plate against the capstan shaft and take-up guide roller.
2. Check that the parallel degree between the capstan shaft and take-up tape guide roller is less than 0.05 mm.

Fig. 2-24 Take-up guide roller parallel

2.6.6 Pinch roller

1. By hand, press the pinch roller pressure arm toward the arrow A to the point where it contacts the capstan.
2. Check that the parallel degree between the pinch roller and capstan is less than 0.05 mm.

Fig. 2-25 Pinch roller

2.6.7 Tension band

1. Take out screw ① and remove the tension band holder.
2. Disengage the tension band from the tension arm, and replace the tension band.
3. Perform the tension pole position check and adjustment and the back tension check (refer to sections 2.6.8 and 2.6.9).

Fig. 2-26 Replacement of tension band

2.6.8 Tension pole position check

1. Set for the Play mode of the operation preset.
2. Confirm that the center of the tension pole lies upon the center line of the sub-deck hole as shown in Fig. 2-27.
3. If necessary, loosen screw ① and adjust the tension band holder to obtain the correct tension pole position.

Fig. 2-27 Tension pole position

2.6.9 Back tension check

1. Perform the following check after completing tension pole position check (refer to section 2.6.8).
2. Use the back tension cassette gauge and set for the Play mode (PUJ42881).
3. During the Play mode, check that the left side meter indicates 41 ± 1 g-cm. If not the correct value, replace the tension band (refer to section 2.6.7).

2.6.10 Tension pole perpendicularity

1. Set for the Play mode of the operation preset. Turn off the power in this state.
2. Set the height gauge on the subdeck and press the tension arm toward the arrow B to the point where the tension arm contact the height gauge lightly.
3. Check that the perpendicularity degree between the tension pole and height gauge is less than 0.05 mm.

Fig. 2-28 Tension pole perpendicularity

2.6.11 Audio/control head parallel

1. Confirm the audio/control head parallel using the A/C head parallel check plate.
2. Put the A/C head parallel check plate against the audio/control head as shown in Fig. 2-29 and confirm that the inclination is less than 0.1 mm as shown by A.
3. Put the plane surface of the plate against the audio/control head and check that there is no space in the upper portion as shown by B.

Fig. 2-29

2.6.12 Torque adjustment

Perform the following checks and adjustment after completing reel servo adjustment.

[A] Loading supply back tension

1. Use the cassette torque meter (PUJ42881) and set for the Play mode.
2. During the loading mode, check that the left side meter indicates 33 ± 10 g-cm.
3. If not, adjust R29 of the reel servo board for 33 ± 10 g-cm (between TP-10 and heatsink of Q10 level of the reel servo board is 30 ± 2 mV).

[B] Playback back tension

1. Use the cassette torque meter (PUJ42881) and set for the Play mode.
2. During the Play mode, check that the left side meter indicates 41 ± 5 g-cm.
3. If not, confirm that the tension pole position.
4. If 41 ± 5 g-cm back tension cannot be obtained by step 3, replace the tension band (refer to section 2.6.7).

[C] Playback take-up torque

1. Use the cassette torque meter (PUJ42881) and set for the Play mode.
2. During the Play mode, check that the right side meter indicates 100 ± 20 g-cm.
3. If not adjust R142 of the reel servo board for 100 ± 20 g-cm.

- [D] Fast Forward (FF) and Rewind (REW) torque
1. Set the operation preset.
 2. Use the torque gauge (PUJ48075-3) and set it on the take-up reel disk.
 3. Hold the torque gauge, then set for the FF mode.
 4. Relax the grip on the torque gauge so that the indicator needle and scale rotate at equal speeds, then read the indication. The correct value is 300 g-cm or more.
 5. In the same manner, check the rewind mode.
 6. If incorrect value, check the reel servo unit.
- [E] Fast Forward (FF) and Rewind (REW) reel brake torque
1. Set the operation preset.
 2. Set for the Stop mode, then let the supply brake and take-up brake move toward the arrow C.
 3. Set the torque gauge on the take-up reel disk. Relax the grip on the gauge so that the disk turns slowly in the direction of the arrow B. Read the indication at the point where the indicator and scale rotate at equal speed. The correct value is 22 ± 7 g-cm.
 4. In the same manner, check the rewind mode. Set the gauge on the supply reel disk and let the disk turn in the direction of the arrow A. The correct value is 22 ± 7 g-cm.

(a) FF/REW Torque

Fig. 2-30

2.7 TAPE TRANSPORT

The tape transport system has been precisely adjusted at the factory and normally does not require readjustment. The following steps are therefore necessary only in case of severe usage or when replacing parts affecting the tape transport system.

2.7.1 Tape transport check

1. Employ a 120 minute tape and check at tape beginning and ending portion according to the following steps.
2. Operate the machine between Loading and Unloading modes several times. Observe the tape at the supply and take-up guide rollers. Confirm absence of curling, wrinkling.
3. During the Play mode, confirm absence of curling, wrinkling.

(a) Guide roller

(b) SUP. Guide pole

(c) T.U. Tape guide roller

Fig. 2-31 Guide roller and Guide pole

Fig. 2-32 Tape transport check

Fig. 2-33 Drum lead check - 2

Notes:

- 1) Slips upward : sound becomes produced by contact between tips of rotating heads and edge of tape.
- 2) Slips downward : tape curls or wrinkles from contacting lead face (sound may also be produced).
- 3) If necessary, perform adjustments according to section 2.7.2.

2.7.2 Tape transport adjustments

Perform only if defects are noted during tape transport check (2.7.1).

If the height has been adjusted, interchangeability adjustments are required (section 2.8).

[A] Guide roller height

1. Loosen the setscrew on the side to be adjusted. Loosen it only enough to allow the guide roller to be turned smoothly with a slotted screwdriver. Use care not to overloosen it.
2. Insert a cassette tape and set for the Play mode.
3. With a slotted screwdriver, turn the guide roller and adjust so that the tape travels smoothly in the drum lead.
4. Check the top edge of the tape travels along the lower face of the upper flange as shown in Fig. 2-34.
5. Tighten the setscrew after completion of adjustment.

Fig. 2-34 Guide roller

[B] Supply guide pole

1. Use a cassette tape and set for the Play mode.
2. Use a nut driver to adjust so that curling or wrinkling of the tape does not occur at the supply guide pole.

Note: This adjustment must be within 0.5 mm (one nut turn is 0.5 mm) with respect to the height adjusted in section 2.6.3. If there is a large discrepancy, check the height of the supply reel disk, (refer to section 2.6.2), tension pole (refer to section 2.6.10) and other mechanical components.

Fig. 2-35 Supply guide pole

[F] Unloading supply tension

1. Use the cassette torque meter (PUJ42881-B) and change for the Stop mode from the Play mode.
2. During the unloading mode, check that the left side meter indicates 52 ± 15 g-cm and the TP-10 level of reel servo board is 65 ± 10 mV DC.
3. If not, adjust R32 of the reel servo board for 52 ± 15 g-cm.

[C] Take-up tape guide roller height

1. Use a cassette tape and set for the Play mode.
2. Loosen the setscrew, and use care not to over loosen it. Adjust by turning the top of the tape guide roller with a slotted screwdriver so that curling or wrinkling of the tape does not occur at the take-up guide roller.
3. Tighten the setscrew after completion of adjustment.

Fig. 2-36 Take-up tape guide roller

2.8 INTERCHANGEABILITY ADJUSTMENT

Before using the alignment tape, employ a cassette tape and confirm correct tape transport referring to section 2.7.

Front service terminal (Front panel)

Fig. 2-37 Check point

- A-RF Refer to section 3.7.1.
- V-RF Refer to section 3.9.1.
- Hi-Fi (FM)
- LEFT } Refer to section 3.7.2.
- RIGHT }
- NORMAL
- LEFT } Refer to section 3.8.12.
- RIGHT }
- D-PULSE Refer to section 3.9.1.

2.8.1 Preliminary checks

1. Connect oscilloscope to V-RF of the Front service terminal (or PRE/REC TP-8). At this time, trigger the oscilloscope externally with the signal from D-PULSE of the Front service terminal (or TP-5 of the D/C servo board).
2. Play staristep signal segment of the alignment tape MH-2).
3. Turn the tracking control and adjust for maximum FM output.
4. Observing the oscilloscope, adjust the flat portion of the maximum output level ('a' in Fig. 2-38) becomes 4 scale divisions. In this condition, next confirm that the level 'b' is more than 3.4 scale divisions (-1.5 dB) in comparison to the level 'a'. At the above measurement, each level should be read at a portion where serrations are comparatively flat.

Fig. 2-38 FM waveform (max. output)

5. When levels 'c' and 'd' (for drum intake and outlet) are 4.0 scale divisions respectively, confirm that level drop at either side of SUP and TU is more than 2.8 scale divisions (-3.0 dB).
6. Turn the Tracking control from end to end. The waveform variation should be nearly parallel as shown in Fig. 2-39 and 2-40.

7. If steps 4 to 6 above are unsatisfied, adjustments are required. Perform adjustments of section 2.8.2 to 2.8.9.

Fig. 2-39 Normal waveform examples

Fig. 2-40 Incorrect waveform examples

2.8.2 Preliminary adjustments

1. Connect oscilloscope to V-RF of the Front service terminal. Trigger the oscilloscope externally with the signal from D. PULSE of the Front service terminal.
2. Play staristep signal segment of the alignment tape MH-2.
3. Turn the Tracking control and adjust for maximum FM output.

Drum input

4. Refer to Fig. 2-41. Examples of incorrect waveforms are shown by A and B. Adjust the supply guide roller so that the rising portion (drum input portion) of the waveform becomes flat as shown by C.

Fig. 2-41 Drum input adjustment

5. Observe the top edge of the tape travels along the lower face of the upper flange and check the waveform does not fluctuation as the tape is lightly pushed up at point (a) as shown in Fig. 2-41.
6. At this time, confirm absence of curling or wrinkling at the guide pole. If contact noise is heard, reconfirm section 2.6.3 and 2.7.

Drum output

7. In the same manner as for the drum input, turn the take-up guide roller to adjust the decay portion (drum output portion) of the FM waveform. Incorrect examples are shown by D and E in Fig. 2-42, while F indicates the correct adjustment.
8. Observe the top edge of the tape travels along the lower face of the upper flange and check the waveform does not fluctuation as the tape is lightly pushed up at (b) as shown in Fig. 2-42.
9. At this time, confirm absence of curling or wrinkling at the take-up tape guide roller. If contact noise is heard, reconfirm section 2.6.4 and 2.7.
10. Carefully and evenly adjust screws (A), (B) and (C) to align the audio/control head height with the tape as shown in Fig. 2-43.

Fig. 2-42 Drum output adjustment

Fig. 2-43 Audio/control head height

2.8.3 Fine adjustment

- After completion of preliminary checks, connect oscilloscope to V-RF terminal. Observe FM waveform and adjust the Tracking control for minimum FM output level. Trigger the oscilloscope externally with the signal from D. PULSE terminal.
- If the waveform becomes as shown by A or B of Fig. 2-44, carefully adjust the supply guide roller height so that the waveform becomes as shown by E, F or G of Fig. 2-45.
- If the FM waveform appears as shown by C or D in Fig. 2-44, carefully adjust the take-up guide roller height to obtain a waveform such as shown by E, F or G of Fig. 2-45.

At this time, if the waveform fluctuates, adjust to the point of minimum fluctuation.

- Vary the Tracking control from maximum to minimum FM output. The waveform variation should be nearly parallel as shown in Fig. 2-46. If not, readjust items in section 2.8.2 and 2.8.3.
- Confirm the audio/control head height (section 2.8.4), azimuth (section 2.8.5) and audio/control head position (section 2.8.7).

Fig. 2-44 Minimum FM output (incorrect examples)

Fig. 2-45 Minimum FM output (correct examples)

Fig. 2-46 Correct waveform

Note: Setscrew tightening

- After confirming absence of tape wrinkling and other transport irregularities, tighten the setscrews while in the Stop mode. Since the guide rollers are easily moved, use care when tightening.

- Again perform the preliminary checks (refer to section 2.8.2).

2.8.4 Audio/control head height

- Connect an oscilloscope to LEFT/RIGHT (NORMAL) of the Front service terminal.
- Play 1 kHz signal segment of the alignment tape MH-1.
- Check that the audio CH-1 (LEFT) output level increase does not exceed 0.5 dB as the tape is lightly pressed down point (a) as shown in Fig. 2-47.
- In the same manner, check that the audio CH-2 (RIGHT) output level increase does not exceed 0.5 dB as the tape is lightly pushed up at point (b).
- If level increase is more than 0.5 dB in step 3 or 4, perform following adjustment.

Fig. 2-47 Audio head height check

- Connect CH-1 probe of the oscilloscope to LEFT (NORMAL) and CH-2 probe to RIGHT (NORMAL) of the Front service terminal.
- Adjust the oscilloscope for equal maximum levels for CH-1, when the tape is lightly pressed downward at point (a), and CH-2, when the tape is lightly pressed upward at point (b).
- Turn screws (A), (B) and (C) in succession by small and equal increments at a time to adjust for the same levels between CH-1 and CH-2.
- If tape curling, wrinkling, etc. occurs at the T.U. tape guide roller, reconfirm section 2.6.4 and 2.7.

Fig. 2-48 A/C head height adjustment

2.8.5 Audio/control head azimuth

- Perform the following steps only after completing section 2.8.4.
- Connect CH-1 probe of the oscilloscope to LEFT (NORMAL) terminal and CH-2 probe to RIGHT (NORMAL) terminal.
 - Play 6 kHz signal segment of the alignment tape MH-2.
 - Adjust screws (A) and (B) (shown in Fig. 2-48) for both maximum output levels and absence of phase difference between CH-1 and CH-2.
 - Confirm the audio/control head height (section 2.8.4).

Fig. 2-49 Audio head phase adjustment

2.8.6 Servo circuit adjustment

- Perform P.B./REC switching point adjustment (refer to section 3.5.2).
- Perform Sub Tracking adjustment (refer to section 3.5.3).

Note: Sub Tracking adjustment has been precisely adjusted at the factory normally does not require readjustment.

The following adjustment are therefore necessary only in case of H distortion becomes produced by during the P.B. mode to E-E mode or when replacing Sub, Tracking VR.

2.8.7 Audio/control head position

Perform the following steps only after completing section 2.8.1 through 2.8.5.

- Connect oscilloscope to V-RF of the Front service terminal.
- Take out a screw of the cleaner assembly.
- Play staircase signal segment of the alignment tape MH-2.
- Turn the Tracking control and confirm that the maximum FM level is obtained at the center click position.
- If not, set the Tracking control to center click position.
- Loosen the three screws (D), (E) and (F) and slide the audio/control head assembly fully in the direction of the drum (indicated by the arrow) as shown in Fig. 2-50.
- Slightly tighten the three screws (D), (E) and (F) and play staircase segment of the alignment tape MH-2.

- Set the audio-control head position tool (PUJ44653) as shown in Fig. 2-51.
- Slowly turn the tool and set the audio/control head assembly to the position where the second maximum peak FM level is obtained. See Fig. 2-52.
- While using care not to slide the position of the three screws (D), (E) and (F) of the audio/control head assembly.
- Confirm section 2.8.1 through 2.8.6.

Fig. 2-50

Fig. 2-51

Fig. 2-52

2.8.8 Final checks

1. Reconfirm section 2.8.1.
If incorrect FM waveform, replace the upper drum assembly (refer to section 2.5.2).
2. Connect an oscilloscope to V-RF and A-RF (or TP-7 of the FM Audio board) of the Front service terminal. With dual trace mode, trigger the oscilloscope externally with signal from D. PULSE of the Front service terminal.
3. Play stairstep signal segment of the alignment tape MH-2.
4. Set the trigger to + slope and observe the video FM waveform (CH-2).
5. Turn the Tracking knob to obtain the maximum video FM waveform.
6. At this time play carrier signal segment of the alignment tape MH-F8 and observe the audio FM waveform (b).
7. Turn the Tracking knob to obtain the maximum audio FM waveform (a).
Observe the audio FM waveform (a) and confirm that the level difference between audio FM waveform (b) and the maximum level (a) obtained manually is:

$$\frac{b}{a} \geq 0.9$$

Fig. 2-53 Audio FM output level

- 5) When the maximum video FM waveform, confirm the audio FM waveform (Fig. 2-54) obtained that:

Fig. 2-54 FM waveform (max. output)

$$\frac{b}{a} \geq 0.8, \frac{c}{a} \geq 0.64, \frac{d}{a} \geq 0.64$$

(Specifications of audio FM waveform)

Note: If the FM dropout is noted, perform the FM audio switching point adjustment (refer to section 3.7.5) before confirmation.

- 6) Play back audio FM waveforms (CH-1 and CH-2) which were recorded without audio signal input respectively, and confirm that both of them meet the FM waveform specification.

Check level variation of the FM waveforms, which should be more than 3.6 scale divisions as the reference is 4 scale divisions on the oscilloscope. (VIDEO: -1.0 dB, FM AUDIO: -1.0 dB)

Also check that the FM level drop is more than 3.0 scale divisions against 4 scale divisions. (VIDEO: -2.5 dB, FM AUDIO: -2.5 dB)

Change the tape to a thin blank tape (T-160) and perform recording and playback in the same manner as above to confirm again that the FM level drop is less than -4 dB (more than 2.5 scale divisions against 4 scale divisions).

Note: For observing FM AUDIO waveform on the oscilloscope, connect the probe to TP7 of the FM AUDIO board.

- 7) If FM waveform is still incorrect by the adjustments from the steps 1 through 5, replace the upper drum assembly (refer to section 2.5.2).

Note: Refer to section 2.8.9.

3. Perform overall checks and adjustments of the servo circuit and video, and then perform the audio circuit adjustment.

2.8.9 Reference

1. When audio FM waveform is not yet standardized after the final checks (section 2.8.8), a satisfactory result can be obtained by adjusting heights of the audio and video heads with a VH microscope (PUJ42990) used as an adjusting equipment.
2. Referring to section 2.5.1 set the machine into the operation preset condition for Play mode and then turn off the power.
- 5) Set the VH microscope (PUJ42990) on the guide pin as shown in Fig. 2-55.

Fig. 2-55 VH microscope setting

Fig. 2-56 Head position

- 2) Confirm that "H" of the value of the relative height between V2 and A1 is as shown in the following table.

Fig. 2-57 Audio head and video head heights

A/V head	V2 - A1	V1 - A2	V1 - V2	A1 - A2
H	41.6 ± 1 μ	41.6 ± 1 μ	0 ± 1 μ	0 ± 1 μ

How to confirm "H" value

- (1) Read the value of "a" of V2 on the VH microscope.
- (2) Lifting the rotation prevention spring upwards turn the upper drum slowly counterclockwise and stop it at the position A1 and fix the spring. At this position read the value (b).
- (3) Read the value of "H" (difference between "a" and "b"). (one graduation of the scale is 2 μ)
- 3) If the value differs from the standard, tighten the set-screw of V2 first, then tighten the A1's setscrew to obtain a satisfactory result.
- 4) In the same manner as above, read the values and obtain satisfactory results for V1 - A2, V1 - V2 and A1 - A2, respectively.
- 5) Confirm that the FM waveforms (CH-1/CH-2) recorded and played back without audio signals by the machine are the standard.
3. Totally check up the servo and video systems, and then do for the audio system.

Note: Contact JVC regarding the VH microscope (PUJ42990).

1. Connect a dual-trace oscilloscope to the front V-RF test point and to the rear panel AUDIO OUT.
2. Set the oscilloscope to "Chop" mode and use internal trigger.
3. Loosen screws ①, ② and ③ to allow sliding the A/C head.
4. Play the MHPE-X alignment tape. Set the TRACKING control to the center detent position.
5. Use the A/C head positioning tool to adjust the head position to align the phases of the audio and FM waveforms. Also adjust for maximum overall FM output.
6. Play the FM AUDIO carrier signal of the MH-F8 alignment tape.
7. Connect the oscilloscope to front A-RF. From the Step 5 position, shift the A/C head to the nearest maximum FM position. Then tighten screws ①, ② and ③.
8. Operate the TRACKING control and confirm maximum FM waveform at the center detent position.

SECTION 3

ELECTRICAL ADJUSTMENTS

Electrical adjustments are required after replacing circuit components and certain mechanical parts. It is important to perform these adjustments only after all repairs and replacements have been completed. Also, do not attempt these adjustments unless the proper equipment is available.

Alignment tape MH-2/MH-8/MH-F8	Extension board PUJ25380-2	Carrier checker jig
		PGJ05008-2 

Segment	Playback Time	Video Signal	Audio Signal	Applications
1	10 minutes	Stairstep	6 kHz	<ul style="list-style-type: none"> • Interchangeability checks and adjustments • Servo circuit checks and adjustments • Audio head azimuth adjustments
2	5 minutes	(none)	3 kHz	<ul style="list-style-type: none"> • Tape speed checks • Wow and flutter checks
3	10 minutes	Color bar	1 kHz (0 dB)	<ul style="list-style-type: none"> • Video signal playback circuit checks and adjustments • Audio signal playback circuit checks and adjustments
4	3 minutes	RF sweep	(none)	<ul style="list-style-type: none"> • Video head resonance adjustments, Q adjustments <p>Marker: 2 MHz, 4 MHz, 5 MHz</p>

Table 3-3

3.1.3 Check and Adjustment steps

The check and adjustment steps are provided in the following in the form of charts. For clarity, the nomenclature used in the charts is outlined below.

Note: Do not use an alignment tape for the mechanism check and tape run check.
When you make the adjustment using the alignment tape, at first, check the tape run function using the recording tape.

No.	Checks and adjustments are numbered in the recommended sequence in which they are to be performed.
Item	Name assigned to the particular check and adjustment step
Check Point	Location to which measuring instrument (oscilloscope unless otherwise noted) is to be connected.
Adjustment Parts	Variable component (resistor, capacitor, etc.) to be adjusted in this step. Dash (—) indicates check only.
Signal	Input signal required to perform adjustment. Dash (—) indicates that special signal is not required.
Color bar	Color bar signal as video input
Stairstep	Stairstep signal as video input
1 kHz	Supply a 1 kHz sinewave as audio input signal.
MH-2 Color bar	Play color bar segment of JVC MH-2 alignment tape.
MH-2 Stairstep	Play stairstep segment of JVC MH-2 alignment tape.
MH-2 3 kHz	Play 3 kHz audio signal segment of JVC MH-2 alignment tape.
MH-2 1 kHz	Play 1 kHz audio signal segment of JVC MH-2 alignment tape.
MH-2 RF Sweep	Play RF sweep segment of JVC MH-2 alignment tape.

MH-8 Color seep	Play color sweep segment of JVC MH-8 alignment tape.
MH-8 400 Hz	Play 400 Hz audio signal segment of JVC MH-8 alignment tape.
MH-8 100 Hz	Play 100 Hz audio signal segment of JVC MH-8 alignment tape.
MH-8 8 kHz	Play 8 kHz audio signal segment of JVC MH-8 alignment tape.
MH-F8 Carrier	Play audio carrier segment of JVC MH-F8 alignment tape.
MH-F8 1 kHz (± 50 kHz DEV)	Play 1 kHz (± 50 kHz DEV) audio signal segment of JVC MH-F8 alignment tape.
Mode	Equipment operating mode at time of check or adjustment
STOP	Power on and machine in Stop mode
REC	Recording mode
P.B.	Play mode
REC → (another mode)	Use blank tape, record, then play back in the mode specified.
E-E	Input signal to output
FF	Fast Forward mode
REW	Rewind mode
PAUSE	Pause mode
Loading	Stop mode to playback mode
Unloading	Playback mode to Stop mode
Description and Waveform	This column provides an explanation of the step, notes, adjustment values and waveform diagrams.

3.2 POWER SUPPLY CIRCUIT

Regulator Board Adjustment Point (Top View)

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
1	5 V DC output voltage	TP-1 [0] [7] Regulator	R2 (5 V Regulator)	—	P.B.	1. Connect the digital voltmeter to TP-1 of the power supply board. 2. Adjust R2 (5 V REG) for 5.0 ± 0.1 V DC.
2	16.5 VDC output voltage	TP-3 [0] [7] Regulator	—	—	P.B.	1. Connect the digital voltmeter to TP-3 of the power supply board. 2. Confirm that the DC voltage becomes 16.5 ± 1.0 V.
3	15 VDC output voltage	TP-6 [0] [7] Regulator	—	—	REC	1. Connect the digital voltmeter to TP-6 of the power supply board. 2. Confirm the DC voltage of 15 ± 1.0 V.
4	12 VDC output voltage	TP-4, TP-5 [0] [7] Regulator	—	—	P.B.	1. Connect the digital voltmeter to TP-4 of the power supply board. 2. Confirm the DC voltage of 12.0 ± 0.2 V. 3. In the same manner, confirm the TP-5.
5	12 VDC output voltage	TP-2 [0] [7] Regulator	—	—	P.B.	1. Connect the digital voltmeter to TP-2 of the power supply board. 2. Confirm that the DC voltage becomes 12.0 ± 0.4 V.

3.3 SYSTEM CONTROL (SYSCON) CIRCUIT

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
1	IC8 clock frequency	Pin 2 of IC8 [0] [8] Syscon	—	—	STOP	1. Connect frequency counter to pin 2 of IC8 and confirm that the frequency becomes $3,580 \pm 10$ kHz (over 2.5 Vp-p).
2	IC17 clock frequency	Pin 5 of IC17 [0] [8] Syscon	—	—	STOP	1. Connect frequency counter to pin 5 of IC17 and confirm that the frequency becomes 500 to 950 kHz (over 2.5 Vp p).

3.4 REEL SERVO CIRCUIT

Reel Servo Board Adjustment Point (Top View)

LOADING/UNLOADING MOTOR VOLTAGE

	MODE	TEST POINT	VR	SPEC
SUP MOTOR VOLTAGE	LOADING	TP10	R29	30 ± 2 mV
	UNLOADING	TP10	R32	65 ± 10 mV
TU MOTOR VOLTAGE	LOADING	TP9	R139	60 ± 10 mV
	STILL	TP9	R145	55 ± 15 mV
	UNLOADING	TP9	—	60 ± 10 mV

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
1	SUP. DC Set	TP-5 TP-12(GND) 20 Reel Servo	R72 (SUP. DC SET-1) 20 Reel Servo	—	STOP	1. Connect digital voltmeter to TP-5 of the Reel servo board. 2. Adjust R72 of the Reel servo board to obtain 6.0 V DC.
2	TU. DC Set	TP-7 TP-12(GND) 20 Reel Servo	R109 (TU. DC SET-1) 20 Reel Servo	—	STOP	1. Connect digital voltmeter to TP-7 of the Reel servo board. 2. Adjust R109 (TU. DC SET) of the Reel servo board to obtain 6.0 V DC.
3	SUP. LOAD Tension	TP-10 20 Reel Servo	R29 20 Reel Servo	—	LOAD-ING	See 2.6.12A.
	SUP. UNLOAD Tension	TP-10 20 Reel Servo	R32 (SUP. UNLOAD Tension) 20 Reel Servo	—	UN-LOAD-ING	See 2.6.12F.
4	T.U. Tension	TP-9 20 Reel Servo	R142 20 Reel Servo	—	P.B.	See 2.6.12C.
5	T.U. LOAD/UNLOAD Tension	TP-9 20 Reel Servo	R139 (T.U. LOAD/UNL. T.) 20 Reel Servo		LOAD-ING UN-LOAD-ING	1. Connect oscilloscope to TP-9 of the Reel servo board. 2. Set for the beginning portion of 120-minute tape, during the Loading mode, adjust R139 (T.U. LOAD/UNL. TENS.) of the Reel servo board to obtain DC voltage of 60 ± 5 mV. 3. During the Unloading mode, confirm that the voltage remains unchanged.
6	T.U. STILL Tension	TP-9 20 Reel Servo	R145 (T.U. STILL TENS.) 20 Reel Servo		P.B. ↓ PAUSE	1. Connect oscilloscope to TP-9 of the Reel servo board. 2. Set for the Pause mode with beginning portion of 120-minute tape and adjust R145 (T.U. STILL TENS.) of the Reel servo board to obtain DC voltage of 55 ± 15 mV.
7	FF & REW Torque	TP18 (REEL) External Trigger TP19 (REEL)	—	—	REW	1. Connect the oscilloscope's probes to TP18 and TP19 (IC4 pin 1) of the Reel Servo board and supply external trigger pulse to TP19. 2. With T-120 tape loaded by its beginning portion, set the deck to the REW mode. 3. Confirm that voltage at the section A of TP18 becomes 6.0 ± 1.2 V 1 sec after that. 4. Set a torque meter to check that FF and REW torque is 430 g-cm each.

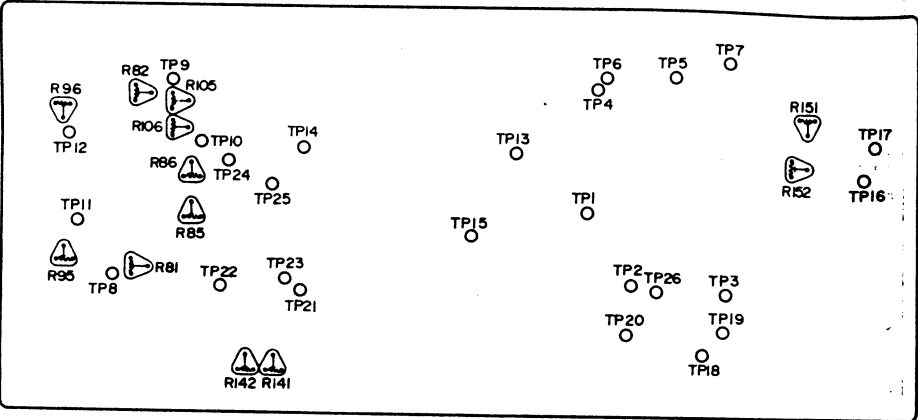

Note: To get the same earth level, the earth of the oscilloscope to be connected to the heatsink of Q10 transistor of the Reel servo board.

3.5 D/C SERVO CIRCUIT
D/C Servo Adjustment Point (Top View)

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
1	DRUM FG Level	TP6 (D/C Servo)	—	MH-2 Color Bar	PB	<div>1. Connect the oscilloscope to TP6 of the D/C Servo board.</div> <div>2. Play the alignment tape MH-2.</div> <div>3. Confirm that signal levels A and B are as follows: A = 2.0 – 3.0 V DC B = 4.0 – 5.0 V DC</div> <div></div>
2	P.B. Switch Point	VIDEO OUT	R41 (D/C Servo)	MH-2	PB	<div>1. Connect a probe of the oscilloscope to VIDEO OUT terminal and the other probe to TP5 (or servicing terminal) of the D/C Servo board, and supply external trigger pulse to TP5 (– [minus] slope).</div> <div>2. Play the stairstep segment of the alignment tape MH-2.</div> <div>3. Adjust R41 so that trigger point is 6.5H after V. sync.</div> <div>4. Change the oscilloscope setting for + (puls) slope and confirm that difference between switching points of two channels is within 1H.</div> <div></div>
3	SUB TRACKING Adjust	VIDEO OUT TP8 (D/C Servo) TP3 (D/C Servo)	R43 (D/C Servo)	Color Bar	REC ↓ PB	<div>1. Supply color bars signal to VIDEO IN terminal.</div> <div>2. Set the TRACKING VR to its center detent position.</div> <div>3. Connect the oscilloscope to VIDEO OUT terminal and TP8 of D/C servo board to observe waveform in dual trace mode. Trigger the oscilloscope at rise of REC CTL pulse of TP8.</div> <div>4. In REC mode, record the section A of the signal (shown in the figure).</div> <div>5. Change connection of the oscilloscope's probe connected to TP8 to TP3 of the D/C servo board and trigger the oscilloscope at rise of TP3's pulse.</div> <div>6. Record the signal, and playing it back adjust R43 to equalize level B with A.</div> <div></div>

3.6 FM AUDIO CIRCUIT
FM Audio Board Adjustment Point (Top View)

Note: Perform the following steps only after completing item 3.8.9 "Video REC FM Level", 3.8.17 "REC Color Channel Balance & Color Level".

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
1	Monitor Output Level	Hi-Fi (L/R) Front Service Terminal EXT. REC LEV VR ADJ.	—	1 kHz −6 dBs	E-E	1. After the adjustment of section 3.6.7 was finished, confirm that monitor output is −8 dBs to −4 dBs (0.86 – 1.39 Vp-p).
2	A. FM Carrier Frequency	TP9 (1.4 MHz) TP10 (1.8 MHz) 0 2 FM Audio	R85 (L-CH FM CAR) R86 (R-CH FM CAR) 0 2 FM Audio	—	REC	1. Connect a frequency counter to TP9 and TP10. 2. Adjust R85 so that L-ch frequency is 1.4 MHz $\pm 0_{-50}$ kHz. 3. Adjust R86 to obtain 1.8 MHz $\pm 0_{-50}$ kHz of R-ch frequency.
3	A. FM REC Level	TP2 TP26 (GND) 0 2 FM Audio	R105 (L-CH REC LEVEL) R106 (R-CH REC LEVEL) 0 2 FM Audio	—	REC	1. Set the oscilloscope as specified below. V : 20 mV/div. H : 0.5 μ s/div. 2. Turn R105 fully clockwise and R106 fully counterclockwise viewed from the parts side. 3. Turn R105 counterclockwise until the 1.3 MHz signal level becomes 34 mV.  4. Next, turn R106 clockwise until level of mixed waveform (1.3 MHz and 1.7 MHz signals) becomes 110 mV. 

No.	Item	Check Point	Adjustment Parts	Signal	Mode	Description and Waveform
4	A. FM P.B. Switching Point	TP16 (FMA) TP17 (FMA) [0] 2 FM Audio D. PULSE	R152 (FMA) R151 (FMA) [0] 2 FM Audio	MH-1 Stairstep	P.B.	<p>1. Connect the oscilloscope's probes to TP16 and TP17. Synchronizing at TP16, observe waveforms at TP16 and TP17 in dual trace mode.</p> <p>2. With the oscilloscope set for \oplus (puls) slope, adjust R152 so that time lag between rise point of TP17 pulse and trailing point of TP16 pulse is 4.7 msec.</p> <p>3. Set the oscilloscope for \ominus (minus) slope and adjust R151 so that time lag between trailing point of TP17 pulse and rise point of TP16 pulse becomes 4.7 msec. This adjustment can be otherwise performed by use of a specified frequency counter for periodicity measurement. (Matsushita's VP-4545A or equivalent)</p> 
5	A. FM P.B. Level	Hi-Fi OUT	R95 (L-CH) R96 (R-CH) [0] 2 FM Audio	MH-F8 1 kHz	P.B.	<p>1. Connect the oscilloscope's probe to HiFi LINE OUT terminal and adjust R95 (L-ch) and R96 (R-ch) so that PB level is -6 dBs (1.10 Vp-p) respectively.</p>
6	EXT. Hi-Fi REC LEVER VR	Hi-Fi OUT REC LEV. VR (Front Panel)	REC LEV. VR (Front Panel)	1 kHz -6 dBs (1.1 Vp-p)	E-E	<p>1. Turn the REC LEVEL VR fully clockwise and confirm that output without load is $6.5 - 9.5$ dBs ($4.65 - 6.57$ Vp-p).</p> <p>2. Turn the REC LEVEL VR again to obtain -6 dBs (1.10 Vp-p) of the output level.</p> <p>Note: For all the following adjustments, keep the VR set to this positon.</p> 
7	Level Meter	On the Meter AUDIO INPUT SELECT SW : SEP METER SELECT SW : Hi-Fi	R141 (L-CH) R142 (R-CH) [0] 2 FM Audio	1 kHz -6 dBs (1.1 Vp-p)	E-E	<p>1. Adjust the LEVEL VR so that Hi-Fi OUT level is -6 dBs.</p> <p>2. Adjust R141 (L-ch) and R142 (R-ch) so that the level meter reads 0 dBs respectively.</p> 
8	REC Deviation	Hi-Fi OUT AUDIO INPUT SELECT SW : SEP	R81 (L-CH) R82 (R-CH) [0] 2 FM Audio	1 kHz -6 dBs (1.1 Vp-p)	REC ↓ P.B.	<p>1. Repeat the adjustment of Section 3.6, item No. 5.</p> <p>2. In recording, turn R81 (L-ch DEV).</p> <p>3. Play back the recorded signal to confirm that PB level is -6 dBs.</p> <p>4. If the PB level does not meet the above specification, repeat the steps 2. and 3. until a result is satisfactory.</p> <p>5. In the same manner as above, adjust R82 (R-ch DEV) to obtain -6 dBs PB level.</p>

SECTION 5 EXPLODED VIEWS AND PARTS LIST

SAFETY PRECAUTION

Parts identified by the \triangle symbol are critical for safety.
Replace only with specified part numbers.

5.1 STANDARD PART NUMBER CODING

5.1.1 Screw coding	5-2
5.1.2 Fuse coding	5-3

5.2 EXPLODED VIEWS AND PARTS LIST

5.2.1 Packing assembly	5-3
5.2.2 Cabinet assembly	5-4
5.2.3 Chassis assembly	5-6
5.2.4 Mounting bracket assembly	5-8
5.2.5 Rear bracket assembly	5-10
5.2.6 Main-deck (1) assembly	5-12
5.2.7 Main-deck (2) assembly	5-14
5.2.8 Sub-deck assembly	5-16
5.2.9 Drum assembly	5-18
5.2.10 Cassette housing assembly	5-20

5.1 STANDARD PART NUMBER CODING

5.1.1 Screw coding

Standard screw part numbers are as follows.

Type of screw
(in capital letters)

1

2

3

4

Shape of screw head
(in capital letters)

Shape of thread
(in capital letters)

5

6

7

8

9

Nominal diameter
(in figures)

Length
(in figures)

Surface treatment
(in capital letters)

Type of screw (first digit)

S Normal screws

D Assembled machine screws (with plain and spring washers)

L " (with spring washer)

N " (with plain washer)

F Feather screws

G Washer head tapping screws

M Wood screws

Shape of screw head (second digit)

B Brazier head

D Binding head

H Oval countersunk head

P Pan head

R Round head

S Flat head

T Truss head

W Washer head (machine screws)

X Toothed head

-Type of screw (first digit) -

- Shape of screw head (second digit) -

Material (third digit)

S Steel	N Nickel silver
E Stainless steel	Y Cast brass
C Cast iron	A Aluminum
U Copper	Z Zinc alloy
B Brass	K Polycarbonate
P Phosphor bronze	

Shape of thread (fourth digit)

P Cross recessed head screws

(-) Slotted head machine screws

X Slotted-cross recessed head machine screws

K Cross recessed head machine screws for precision equipment (type 1)

H " (type 3)

A Cross recessed head tapping screws (type 1)

B " (type 2)

C " (type 3)

E Cross recessed head special tapping screws (brand : evertight)

F " (brand : P-tight)

T " (brand : taptight)

G " (brand : taptight)

- Shape of thread (fourth digit) -

Nominal diameter (fifth and sixth digits)

The fifth and sixth digits are numbers indicating a nominal diameter or dimension. If the dimension exceeds 10 mm, three digits are used. The number indicates a nominal diameter or dimension, given in millimeters, multiplied by ten.

Length (seventh and eighth digits)

The seventh and eighth digits are numbers indicating length in millimeters. The preceding figure is zero when the dimension is smaller than 10 mm. For machine screws used in precision equipment whose length is given in units of 0.1 mm, the number indicates ten times the size of their length.

Surface treatment (ninth digit)

Z Dichromate treatment after galvanizing (MFZn II-C)

N Nickel plating (MFNi II, MFNi I)

R Chromium plating (MBCr II, MBCr I)

G Silver plating (SP4)

B Black coating after plating

F Blackening of iron (FB)

M Blackening after galvanizing

K Pickling of brass (PF2)

P Phosphate treatment

W Uni-chrome plating

L Coating with transparent paint

A Coloring red after galvanizing (MFZn II-C)

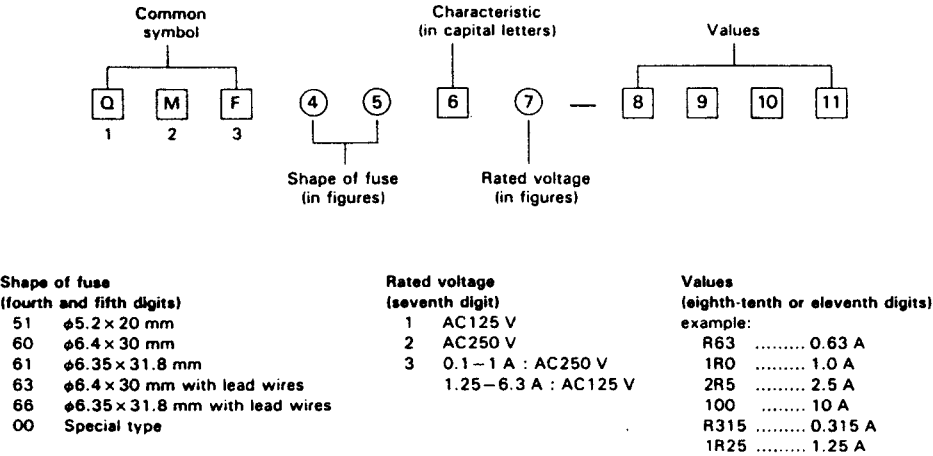

C Coloring blue after galvanizing (MFZn II-C)

T Coloring green after galvanizing (MFZn II-C)

V Coloring purple after galvanizing (MFZn II-C)

5.1.2 Fuse coding

Standard fuse part numbers are as follows.

Characteristics (sixth digit)

Symbol	Fusing Current	Fusing Time	Remarks
A	210 %	Within 2 min.	Anti-rush type (for Europe)
	275 %	0.6 – 10 sec.	
	400 %	0.15 – 3 sec.	
	1000 %	0.02 – 0.3 sec.	
B	210 %	Within 30 min.	Regular fusible type (for SEMKO, Europe)
	275 %	0.05 – 2 sec.	
	400 %	0.01 – 0.3 sec.	
C	135 %	Within 1 hr.	Regular fusible type (for UL, Japan)
	200 %	Within 2 min.	
E	210 %	Within 2 min.	Anti-rush type (for Europe)
	275 %	0.6 – 10 sec.	
	400 %	0.15 – 3 sec.	
	1000 %	0.02 – 0.3 sec.	
J	135 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
M	135 %	Within 1 hr.	Regular fusible type (for UL)
	200 %	Within 2 min.	
R	160 %	Within 1 hr.	Regular fusible type
	200 %	Within 2 min.	
S	160 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
	700 % – 2000 %	Within 0.01 sec.	
U	135 %	Within 1 hr.	Anti-rush type (for UL)
	200 %	Within 2 min.	
	800 % – 2000 %	Within 0.01 sec.

This exploded view diagram illustrates the assembly of a mechanical component. The parts are numbered as follows:

- 1**: A circular base plate with a central hole and a flange.
- 2**: A circular plate with a central hole and a flange, positioned above part 1.
- 3**: A circular plate with a central hole and a flange, positioned below part 2.
- 4**: Two screws used to secure part 2 to part 1.
- 5**: A circular plate with a central hole and a flange, positioned below part 3.
- 6**: A rectangular plate with a central hole and a flange, positioned to the right of part 5.
- 7**: Two screws used to secure part 6 to part 5.
- 8**: A rectangular plate with a central hole and a flange, positioned to the right of part 3.
- 9**: Two screws used to secure part 8 to part 3.
- 10**: A circular plate with a central hole and a flange, positioned below part 5.

SECTION 6 ELECTRICAL PARTS LIST

SAFETY PRECAUTION

Parts identified by the Δ symbol are critical for safety. Replace only with specified part numbers.

ABBREVIATIONS IN THIS LIST ARE AS FOLLOWS:

RESISTORS—All resistance values are in ohms (Ω), unless otherwise indicated.

k	: 1,000 (Kilo)
M	: 1,000,000 (Mega)
Chip R	: Chip Resistor
Chip VR	: Chip Variable Resistor
Comp. R	: Composition Resistor
CR	: Carbon Film Resistor
FR	: Fusible Resistor
MFR	: Metal Film Resistor
MPR	: Metal Plate Resistor
OMR	: Oxide Metal Film Resistor
PMR	: Precision Metal Film Resistor
UFR	: Unflammable Resistor
VR	: Variable Resistor (Potentiometer)
WR	: Wire Wound Resistor

CAPACITORS—All capacitance values are in μ F, unless otherwise indicated.

pF	: μ F (Pico farad)
C Cap	: Ceramic Capacitor
Chip Cap	: Chip Capacitor
Chip T Cap	: Chip Tantalum Capacitor
E Cap	: Electrolytic Capacitor
FM Cap	: Film Mica Capacitor
LL Cap	: Low Leak Current Electrolytic Capacitor
MM Cap	: Metalized Mylar Capacitor
MP Cap	: Metalized Paper Capacitor
MY Cap	: Mylar Capacitor
NP Cap	: Non-polar Capacitor
PC Cap	: Polycarbonate Capacitor
PP Cap	: Polypropylene Capacitor
PS Cap	: Polystyrol Capacitor
T Cap	: Tantalum Capacitor
TF Cap	: Thin Film Capacitor
TR Cap	: Trimmer Capacitor

NOTES:

- [2 digits] indicates circuit board symbol number.
- "X " indicates quantity per set.

6.1 STANDARD PART NUMBER CODING

6.1.1 Fixed resistor coding

Fixed resistor part numbers are as follows.

Type of resistor (third digit)	Rated wattage (fourth and fifth digits)	Tolerance (seventh digit)	Assistant code (twelfth digit)
C Composition resistors	A0 1/10 W	F $\pm 1\%$	A Small type
D Carbon film resistors	18 1/8 W	G $\pm 2\%$	B Small type
F Unflammable resistors	16 1/6 W	J $\pm 5\%$	S Small type
G Oxide metal film resistors	14 1/4 W	K $\pm 10\%$	Y Lead tapping
H Fusible resistors	12 1/2 W	M $\pm 20\%$	Z Lead tapping
M Metal plate resistors	01 1 W		
S Metal glazed resistors	02 2 W		
V Precision metal film resistors	03 3 W		
W Wire wound resistors	04 4 W		
X Metal film resistors	05 5 W		
Z Special resistors	06 6 W		
	07 7 W		
	08 8 W		
	10 10 W		
	15 15 W		
	A6 16 W		
	20 20 W		
	30 30 W		

Values (eighth - tenth or eleventh digits)
examples:

R47	0.47 Ω
4R7	4.7 Ω
470	47×10^0
471	47×10^1
472	47×10^2
473	47×10^3
474	47×10^4
475	47×10^5

ORV resistance shown by four digits:

4640	464×10^0	464 Ω
4641	464×10^1	4.64 k Ω
4642	464×10^2	46.4 k Ω

Shape of resistor (sixth digit)

Note: ■ indicates flame retardant resistor.

Type of resistor	C	D	F	G	H	M	S	V	W	X
1										
2										
3										
4										
5									(L) type	
6										
7			Lug (B) type							
8			Lug (A) type				Chip			
9			Lug (C) type							

6.1.2 Fixed capacitor coding

Fixed capacitor part numbers are as follows.

Ceramic capacitors

Type of capacitor (first - third digits)	Shape of capacitor (fourth digit)				
Symbol	Characteristics	Mono-direction	Kink lead	Axial lead	Axial forming lead
QCC	Ceramic	1		4	5
QCD	High capacitance				A
QCF	High capacitance	1,4	3		8,A
QCS	Temperature compensation	1	3	4	5
QCT	Temperature compensation				8,A
QCV	Ceramic	Special coding			
QCX	Ceramic			1	3
QCY	High capacitance	1,4	3	6	7
Q CZ	Special type	Special coding			
QCB	Ceramic			8	C

Electrolytic capacitors

Type of capacitor (first-third digits)	Shape of capacitor (fourth digit)				
Symbol	Characteristics	Tubular	Mono-direction	Anti-stress	Forming
QEB	Low leakage		4	5	6
QEC	Low leakage		4,8,A	9,B	6,C
QEE	Tantalum (normal)		4	5	6
QEF	Tantalum (small)		8		
QEG	Chip tantalum	8 (chip type)			
QEH	Low impedance		4		
QEK	Miniature type		4	5	6
QEL	Small type		4		7
QEM	Small type		4,A	5	6
QEN	Non-polar	2	4	5	6
QEP	Non-polar (small)		4,A	5,B	6,C
QER	Miniature type		4	5	6
QET	Small type	2	4,A	5,B	6,C
QEU	Small type		4	5	6
QEV	Small type		4		7
QEW	Normal	2	4	5	6

Paper film capacitors

Type of capacitor (first - third digits)		Shape of capacitor (fourth digit)				
Symbol	Characteristics	Tubular	Normal		Flame retardant	
			Mono-direction	Kink lead	Mono-direction	Kink lead
QFA	Metalized polypropylene				7	
QFE	Metalized mylar				5	
QFF	Film mica		4			
QFG	Polypropylene film		4	8		
QFH	Metalized mylar	2	4	3	5, 7	6
QFJ	Mylar (special)		4			
QFK	Metalized mylar (small)				5	
QFM	Mylar	2	4	3, 7	5	6
QFN	Mylar (small)		4	3		
QFP	Polypropylene		4	3, 8		
QFS	Polystyrol	2	4	3		
QFV	Thin film		4	8		
QFZ	Special type		Special coding			

Rated voltage (fifth and sixth digits)

Fifth digit \ Sixth digit	A	B	C	D	E	F	G	H	J	K	V	W	X
0						3.15	4.0		6.3				
1	10		16	20	25		40	50	63	80	35		
2	100	125	160	200	250	315	400	500	630		350	450	600
3	1000	1250		2000				5000					

Tolerance (seventh digit)

A	+100 %	M	±20 %
F	±1 %	N	±30 %
G	±2 %	P	+100 %
H	+50 %	R	+30 %
J	±5 %	X	+40 %
K	±10 %	Z	-20 %

Values (eighth - tenth digits)

Example: Values are in picofarads	
10110 × 10 ¹ pF..... 100 pF
10210 × 10 ² pF..... 1,000 pF (0.001 μF)
10310 × 10 ³ pF..... 10,000 pF (0.01 μF)
10410 × 10 ⁴ pF..... 100,000 pF (0.1 μF)
10510 × 10 ⁵ pF..... 1 μF
5R0 5.0 pF

Assistant code (eleventh digit)

G	Small size
Z	Lead taping
Y	Lead taping

6.1.3 Fuse coding

Standard fuse part numbers are as follows.

Shape of fuse (fourth and fifth digits)

51	ø5.2 × 20 mm
60	ø6.4 × 30 mm
61	ø6.35 × 31.8 mm
63	ø6.4 × 30 mm with lead wires
66	ø6.35 × 31.8 mm with lead wires
00	Special type

Rated voltage (seventh digit)

1	AC125 V
2	AC250 V
3	0.1 - 1 A : AC250 V 1.25 - 6.3 A : AC125 V

Values (eighth-tenth or eleventh digits)

example:	
R63 0.63 A
1R0 1.0 A
2R5 2.5 A
100 10 A
R315 0.315 A
1R25 1.25 A

Characteristics (sixth digit)

Symbol	Fusing Current	Fusing Time	Remarks
A	210 %	Within 2 min.	Anti-rush type (for Europe)
	275 %	0.6 - 10 sec.	
	400 %	0.15 - 3 sec.	
	1000 %	0.02 - 0.3 sec.	
B	210 %	Within 30 min.	Regular fusible type (for SEMKO, Europe)
	275 %	0.05 - 2 sec.	
	400 %	0.01 - 0.3 sec.	
C	135 %	Within 1 hr.	Regular fusible type (for UL, Japan)
	200 %	Within 2 min.	
E	210 %	Within 2 min.	Anti-rush type (for Europe)
	275 %	0.6 - 10 sec.	
	400 %	0.15 - 3 sec.	
	1000 %	0.02 - 0.3 sec.	
J	135 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
M	135 %	Within 1 hr.	Regular fusible type (for UL)
	200 %	Within 2 min.	
R	160 %	Within 1 hr.	Regular fusible type
	200 %	Within 2 min.	
S	160 %	Within 1 hr.	Anti-rush type
	200 %	Within 2 min.	
	700 % - 2000 %	Within 0.01 sec.	
U	135 %	Within 1 hr.	Anti-rush type (for UL)
	200 %	Within 2 min.	
	800 % - 2000 %	Within 0.01 sec.
